1 Target application scenario :

Home automation :- Home automation is the technology to convert the traditional home into a smart home .

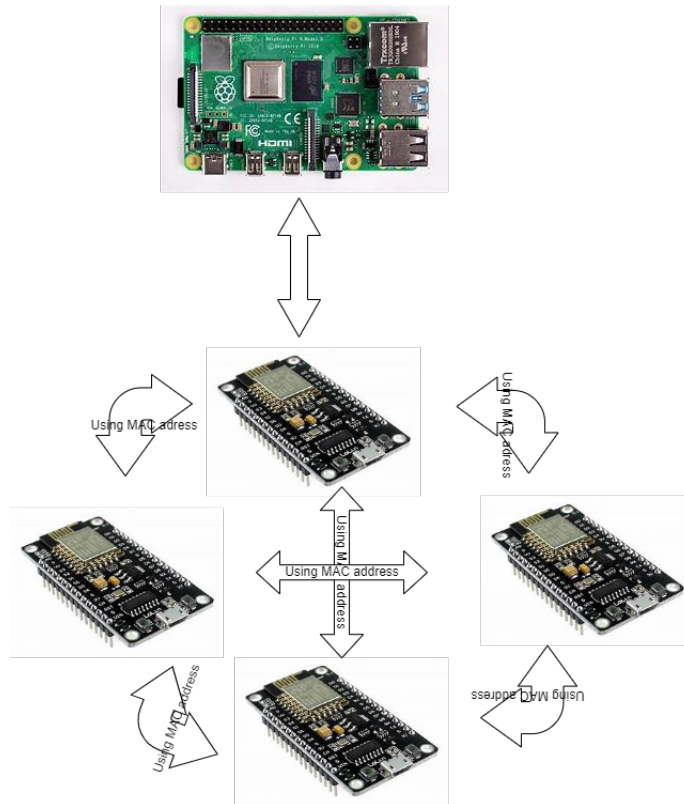

Application:-

By adding advanced technologies such as sensors and communication modules into everyday household appliances. These devices connect to a network that home-owners can access to see data about their home.

2 Architecture of the network :

3 First-subnetwork

4 Second subnetwork :

Using I2C communication

5 Addressing schemes for the nodes

Addressing schemes - IPv4, I2C and UART communication .
No of nodes - 7
